- HTML5
- CSS
- Sass
- JavaScript
- TypeScript
- SQL
- React.js
- Remix
- GraphQL
- Apollo
- Node.js
- Express.js
- PostgreSQL
- Prisma.io
- Firebase
- Web / REST APIs
- Git / GitHub
- Jest
- Cypress
- Jira / Asana / Figma

DEVELOPMENT EXPERIENCE

Hinge Health via Foundry Interactive

04/2022 – 10/2022

Front End Web Developer

Front-end developer working for large healthcare company, embedded with an in-house development team, performing the following tasks:

- Developed secure pages and forms using React and TypeScript following Atomic design principles while utilizing Styled Components and Storybook to create a reusable and extensible component library.
- Wrote end-to-end and unit tests using the Cypress and Jest frameworks along with the React Testing Library utility package.
- Integrated with multiple third party APIs and libraries such as Mixpanel for event tracking, Sentry for error logging/reporting, Split.io for feature experimentation and React Hook Form for forms.
- Would occasionally work on one of the backend services using Node and update an API configuration, change a GraphQL schema or query different feature splits to update logic.
- Participated in agile development in fast-paced CI/CD environments using Github Actions.

DownWrite via Foundry Interactive

04/2021 – 03/2022

Fullstack Software Developer

Software developer working alone for small music startup responsible for the following:

- Oversaw the launch of the MVP to public and was responsible for maintaining existing features while iterating over and adding new ones all while site was getting thousands of views a month.
- Developed responsive web pages using React and TypeScript while utilizing numerous packages such as Framer Motion for animation, Formik for forms, Dinero.js for handling currency and FFmpeg for music/video compression and conversion.
- Used Node and the Firebase SDK to integrate the front end with Firebase backend that utilized many features like their NoSql database, content and data storage, cloud functions, analytics and error reporting and basic authentication.
- Integrated with and utilized multiple third party APIs including Braintree/Paypal for payments, Quaderno for taxes, Algolia for data searching/suggestions, and Mailchimp for emails.

PROFESSIONAL SUMMARY

Determined Software Developer with experience building full stack web applications using multiple front end and back end languages and frameworks in both small and large scale companies. Able to quickly learn in fast paced, demanding new environments; often entirely new languages or tools. Passionate about solving problems and learning new things. Excellent interpersonal communication and teamwork skills developed over 6+ years of customer service experience in the food service industry.
